HIGHLIGHTS

- Collaborated with a team of 4 developers in DAASH to automate network data processes.
- Built relationships through 10+ coffee chats and networking sessions.
- Created a demo for DAASH watch list to showcase functionality

GREATEST SUCCESS

- Learned to navigate through intricate code structures.
- Created successful project outcomes and positive team dynamics.

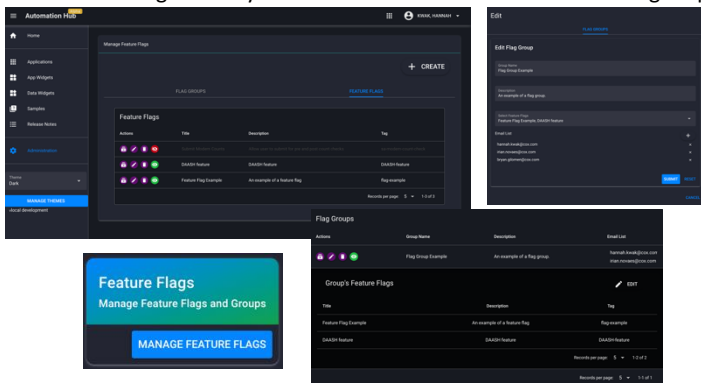

GREATEST CHALLENGE

- Confronted fears of seeking feedback and mentorship to build confidence and validate skills, leading to improved performance and professional growth.

PROJECTS

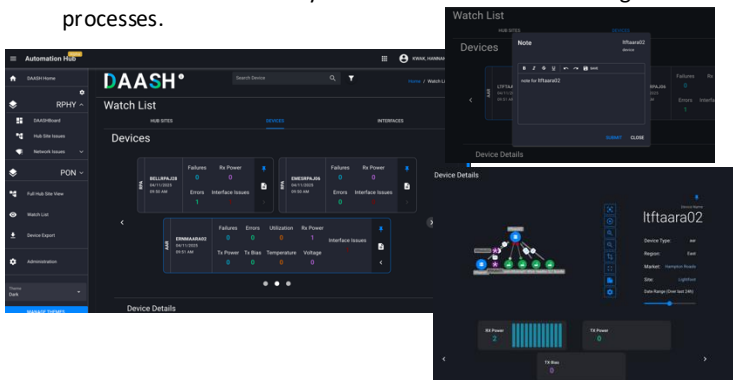

Automation Hub Feature Flags

- Developed full-stack feature flag administration system, supporting creation, editing, and dynamic management of flag groups and individual flags.
- Designed UI to view and manage flags and group subscriptions, streamlining visibility and rollout control across stakeholder groups.

DAA Service Health (DAASH) Watch List

- Co-designed a full stack, dynamic Watch List page, allowing users to pin RPHY and PON devices across three intuitive tabs-Hub Sites, Devices, and Interfaces-for fast access and monitoring.
- Developed an interactive summary card for each pinned device to enhance network visibility and streamline troubleshooting processes.
